

PERLA MARINE

BOAT & YACHT MAINTENANCE · REPAIR · TECHNICAL SERVICE

CORPORATE PROFILE

Confidence at sea, *built with discipline on land.*

A corporate marine solutions partner managing boat and yacht maintenance, repair, refit, and technical service with engineering discipline, field experience, and transparent communication.

We don't just repair marine assets, *we prepare them for the future.*

Perla Marine is a corporate service company that manages maintenance, repair, and technical service processes for boat and yacht owners, captains, operators, and manufacturers.

Our scope of work covers the boat's full technical picture — from composite production and repair to marine electrical and lithium systems, from electronics infrastructure to propulsion-steering, mechanical systems, and deck equipment.

We treat every operation not as a temporary fix, but as a maintenance decision that supports the boat's safety, usability, and long-term operating value.

Our Vision

To turn marine maintenance in Turkey into a service culture with real standards.

Our Mission

Diagnose the need correctly, apply the right solution at the right scope.

The boat's need changes. *So does the service scope.*

We treat each service category as a distinct operation, and assess the relationship between systems together when needed.

01 Composite Solutions From mold and pattern preparation to production and repair, applied to hulls, decks, and structural surfaces.	02 Marine Electrical We make power generation, storage, distribution, and control infrastructure safe, accessible, and serviceable.
03 Marine Electronics Installation, integration, and maintenance of navigation, communication, security, and remote monitoring equipment.	04 Heating, Cooling and Ventilation Climate control and ventilation systems that preserve comfort and air quality in living areas.
05 Mechanical Systems Plumbing, pump, valve, and sealing solutions for fluid transfer, wastewater, fuel, and living systems.	06 Engine, Propulsion and Steering Installation, maintenance, adjustment, and troubleshooting for propulsion and steering systems.
07 Sailing Rig and Rigging We handle rigging, winches, blocks, and deck hardware for safe operation and maintenance.	08 Deck Equipment Installation, maintenance, and boat-specific adaptation of anchoring, access, and safety equipment.
09 Production Consulting Technical coordination, serviceability, and field consulting for manufacturers, production to delivery.	10 Boat-Specific Solutions Workable solutions for needs that don't fit a ready-made category, matched to use and budget.

Because we see trust not as a claim, *but as a way of working.*

Working with Perla Marine means the technical need is addressed with the right questions, options are assessed clearly, and work proceeds through defined checkpoints.

01

Field experience

We base decisions not just on catalog information, but on real conditions encountered on the boat.

02

Technical integrity

We treat composite, electrical, electronics, mechanical, propulsion, and deck systems as one integrated structure.

03

Corporate responsibility

Safe maintenance for boat owners, actionable technical coordination for manufacturers.

04

Measured commitments

Rather than promising outcomes before inspection, we recommend a reliable, well-founded next step.

Corporate Partnership for Manufacturers

We support boat and yacht manufacturers on service access, system layout, maintainability, field inspection, technical documentation, and application coordination.

Boat maintenance support along the *Aegean and Marmara coasts.*

Our İzmir-based team carries out planned site visits to marinas in the Aegean, Mediterranean, and Marmara regions for composite, marine electrical, electronics, mechanical, and propulsion maintenance.

İzmir

Our home base — the region with our fastest, most frequent site support.

Muğla

Bodrum, Marmaris, Fethiye, Göcek, Datça — planned site visits.

Aydın

Service to marinas in Kuşadası and Didim via planned trips.

Antalya

Kemer, Kaş, Finike, Alanya — pre/post-season site planning.

Marmara Region

İstanbul, Yalova, Bursa, Balıkesir — visits planned around requests.

Other Regions

Requests from other coastal areas of Turkey are also considered.
